

Call for Seed Grant Proposals for Holistic Safety and Security

Funding period up to June 30, 2020

The *Holistic Safety and Security* research impact area is soliciting seed grant proposals to grow new collaborations that solve challenges in cybersecurity and critical infrastructure that affect global economies, security, safety and health with funding to be spent from July 1, 2019 through June 30, 2020. The purpose of this seed grant funding opportunity is to provide support for supplies, equipment, salary (undergraduate student, partial graduate student, faculty summer) support in these collaborations. We expect this support leads to the submission of external proposals and fosters the development of this Polytechnic research community.

To be considered, proposals must include the following sections, with an overall limit of three (3) pages.

1. Research team members, with your explanation of how the project is interdisciplinary
2. Problem Statement and Research Question(s)
3. Relevance of the problem to the *Holistic Safety and Security* impact area
4. Proposed Approach
5. Expected Outcomes, including a brief description of at least two external funding opportunities relevant to the proposed effort for future submission of proposals.
6. Budget and timeline with Gantt chart– funding period will be up to June 30, 2020.

Guidelines

- All awarded funding must be expended by June 30, 2020.
- The PI for the proposal must be an active member of the *Holistic Safety and Security* community.
- The PI and Co-PIs must be from at least two different departments, representing distinct disciplines, within Purdue. Co-PIs may be from another Purdue college, but the funding can only be used for Polytechnic expenses (including support for students).
- Faculty may submit multiple proposals. No more than one proposal will be funded per faculty member listed as a PI and no more than one will be funded per faculty member as a co-PI. This guideline will span across all five Polytechnic Research Impact Areas.
- PIs of current seed grants (awarded in the most recent competition) are ineligible to serve as PI for this competition. PI eligibility will resume on June 30, 2019.

Review Process

In the first phase, submitted proposals will be peer-reviewed by HSS members using a comparative process to select up to 5 proposals to engage in the second phase. This review will be based on:

1. *Originality*. This opportunity looks to grow new research ideas and collaborations. Ideas that have been previously presented to a Research Impact Area or internally or externally funded previously will not be supported through this funding opportunity. ****See Note**
2. *Relevance to the HSS impact area mission*. The proposed approach should have the potential to make a large impact on solving a relevant problem to the HSS mission; and
3. *Strengthening the HSS community*. The proposed approach should leverage the expertise of relevant faculty members. The proposal will be judged based on the degree of collaboration needed to solve the problem.

The second step will entail presentations by the PIs of selected proposals during the HSS meeting on April 9th, 2019 to the HSS community. Attending HSS members will review and rank the presented proposals for funding. HSS leader Yang will submit recommendations for funding to the Polytechnic Associate Dean for Research, who will make the final decision on awards and the final level of funding (which may be less than the requested amount) for each award. We expect to fund projects up to \$12,000 per award, for a maximum of \$24,000 depending on the availability of funds.

Timeline

- February 28, 2019: RFP is Released
- April 5, 2019: Proposals must be submitted as a Word or PDF attachment to an email with the subject line “HSS Seed Grant Proposal 2019-2020” to Felicia Anderson at fanderso@purdue.edu by 4pm ET to be eligible.
- April 9, 2019: Presentations of selected proposals will occur during the HSS meeting.
- April 23, 2019: Awards announced
- July 1, 2019: Funds are available for use

Terms and Conditions

- PI's are expected to expend all funds by June 30, 2020, submit a 2-page report highlighting the work accomplished, scholarly outcomes, and plans for future research, and present this to the HSS group during a meeting before 9/4/20.
- Any faculty member receiving direct support (salary, travel, equipment, student support, etc.) will be expected to be an active member of the RDE impact area by contributing to the success of the group and its members. Non-members may be Co-PIs but cannot receive direct support. Extenuating circumstances that necessitate a deviation from this condition will be considered with strong justification.
- ****Note:** We expect that concepts previously funded by an internal seed grant or an external funding agency will have advanced to a stage at which no further internal seed grant funding is necessary for progress and preparation for external funding. These “graduated” projects will not be considered for seed grant funding and the submission of these projects is discouraged. Investigators who are unsure if their project is considered “graduated” should contact Associate Dean of Research Berger to discuss.

Budget

Supplies & Equipment	\$ _____
Undergraduate Student Salaries	\$ _____
Partial graduate Student Support	\$ _____
Faculty Summer Support	\$ _____
Total	\$ _____

Gantt chart to show tasks/milestones with time:

Project Tasks and Milestones			Month – Month			Month-Month			Month-Month
